DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on 11/05/02 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 3, 6, 7, 8, 9, 10, 11, 12, and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by TENCZAR (U. S. Patent No. 4,030,494). Tenczar discloses a connector element having a conduit 55, an inner socket connector 56, opening element 54 on an outer socket connector, housing 52, shut-off element 57 adapted for sealing the conduit, sealing part 58 having a cylindrical base body 63 and lock 60 that initially holds the barrier to the housing. See figs. 7, 8.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over TENCZAR in view of CHALLENGER et al. (U. S. Patent No. 5,492,147). Tenczar discloses the claimed invention except for a slit in the membrane and making the membrane from silicone. Challenger teaches the use of slits in barrier membranes 32, 46, 94 to assist in opening the barriers. The use of silicone as seals in medical devices is notoriously well known.

Allowable Subject Matter

Claims 14, 15, and 17 are allowed. The claims are allowed for reciting a connector element and a method of connecting first and second connector elements of fluid lines as claimed including a penetration body disposed within the conduit moveable to the shut-off element of the conduit for opening the shut-off element (claims 14, 15) and the method of connecting connector elements including pushing a second housing into a first housing, first and second sealing parts do not contact conduit of first and second connector elements respectively, and pushing forms a continuous conduit and further pushing opens shut off elements of first and second connector elements by a penetration body is not found nor fairly taught in the prior art of record.

Art Unit: 3763

Claim 13 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
